

AGRICULTURE

YEAR 7

Design Technology (Food, Fibre and Production) – “Habitats & Horticulture”

Step into the vibrant world of sustainable agriculture, where tiny heroes wield tremendous power! This unit invites students to explore the vital role of beneficial organisms in nurturing our agricultural ecosystems. From researching and selecting insect allies for horticultural small crops to crafting habitats tailor-made for home gardens, students embark on an experiential journey. Through this immersive odyssey, they uncover the intricate web of life sustaining our planet's food systems, fostering a deep appreciation for the unsung heroes of the soil.
