

AGRICULTURE

YEAR 8

Food, Fibre, and Agriculture - "Sustainable Cultivation"

Students will explore sustainable food production methods, with a focus on cultivating their own wicking beds. They will delve into factors influencing sustainability in agriculture, learn about plant growth, and design graphical representations of their wicking bed plans. Through hands-on activities and research, students will identify solutions to local sustainability issues and craft informative brochures on sustainable gardening practices. The unit aims to develop students' project management skills, design thinking, and understanding of sustainable food production in a practical and engaging manner.
